Interest

Inspired by the unveiling of Boston Dynamics' Atlas and LG CLOiD during my military service, I developed an interest in robotics. I am currently exploring my interest in Vision-Language Models (VLM) and Vision-Language-Action (VLA) architectures, with a strong commitment to continuous self-improvement to build a career in the robotics industry.

To further deepen my academic foundation and field experience, I am highly interested in pursuing an internship at a research lab specializing in VLM and VLA.

Education

B.S. Korea University, Department of Data Science Mar. 2021 – Aug. 2027
(Expected)

- GPA: 3.54/4.5

Projects

Multi-Agent AI for Adversarial Pacman Environment | **COSE361** Spring 2024

- Implemented a dynamic two-agent AI system in Python, utilizing A* search, BFS, and Manhattan distance heuristics to execute adaptive offensive and defensive pathfinding strategies based on real-time score differentials.

Music Source Segmentation with U-Net based model | **DATA301** Spring 2024

- Developed a Music Source Segmentation system in Python utilizing parallel U-Net architectures to separate audio tracks into distinct sources including vocals, drums, bass, and other instruments.
- Configured machine learning environments on Google Cloud Platform (GCP) and managed CPU/GPU resource allocation to optimize scalable model training.

Awards

Top student (Spring 2024): Achieved a GPA of 4.33/4.5

Relevant Skills

C, C++, R, Python (PyTorch, TensorFlow, JAX)

Service and Leadership

Republic of Korea Air Force Aug. 2024 – Mar. 2026

- Honorably discharged as a Sergeant

College of Informatics, Korea University Nov. 2021 – Nov. 2022

- Student Vice President
